# 5 Tools to Identify a DeFi Scam Token

Quick and easy ways of researching tokens to prevent loss of funds

Written by Matt

Updated over a week ago

As scammers evolve and create more elaborate schemes, identifying scam tokens in DeFi has become increasingly difficult. Here are five tools that can be used to help identify scam tokens, and hopefully help prevent your loss of capital.

*Disclaimer: This is not an exhaustive list, nor will these tools provide 100% accuracy when determining a token's integrity. Please DYOR, and as always, use them at your own risk.*

## Dextools

Dextools is available for use with Ethereum and Binance Chain, and is a great platform to quickly see what is going on with a token. After searching for the token contract address, you will be able to sort the list of all the buys and the sells happening for a token by clicking the "Type" category. If you don't see any sell orders, there is a chance you are looking at a honeypot, or there is some type of restriction on selling in place.

In this example with a FLOKI clone, you can see that not a single wallet address has sold the token:

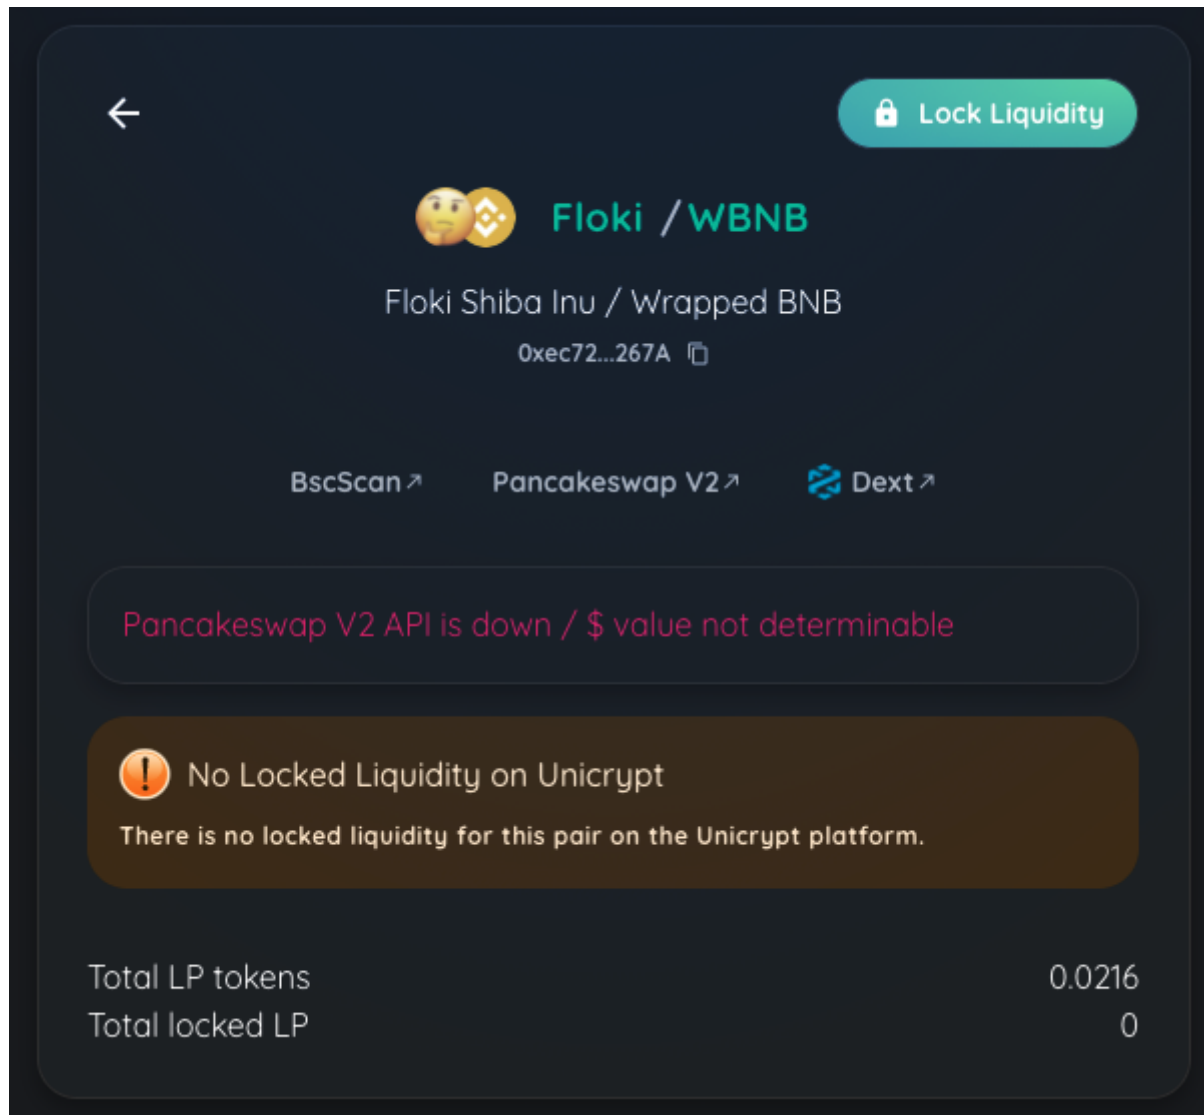

Trade History							
My positions							
Floki (last 500 trades) ▼							
Date ▼	Type	Price USD ▼	Price BNB ▼	Amount Floki ▼	Total BNB ▼	Maker	Others
2021-06-25 11:11:23	buy	\$0.00524521	0.00001862	1,124.0524	0.02092515	0x064338...9d5e

2021-06-25 05:53:11	buy	\$0.00275707	0.00000966	1,753,101.8	16.935728	0x8fab90...fb76	

*Bonus: If you see only green candles on the chart across all timeframes, chances are, nobody has been able to sell.*

This being said, if you do see some visible sell orders, there is still no guarantee that it is *not* a honeypot scam. Some scammers will "whitelist" a few addresses (while "blacklisting" the majority of the rest) simply to give the appearance of normal trading activity for the pair.

## Unicrypt:

Unicrypt is a great tool that can be used to quickly check liquidity status for a specific token. If the token creator's initial liquidity is locked, then they can't withdraw the funds (rug pull), effectively stealing funds from you, the token holder.

\*\*\*Please note: Keep an eye out for a short time-lock on the liquidity. Sometimes scammers will "lock up" the tokens for only a couple days, then when the time is up, pull the rug.

## A Block Explorer

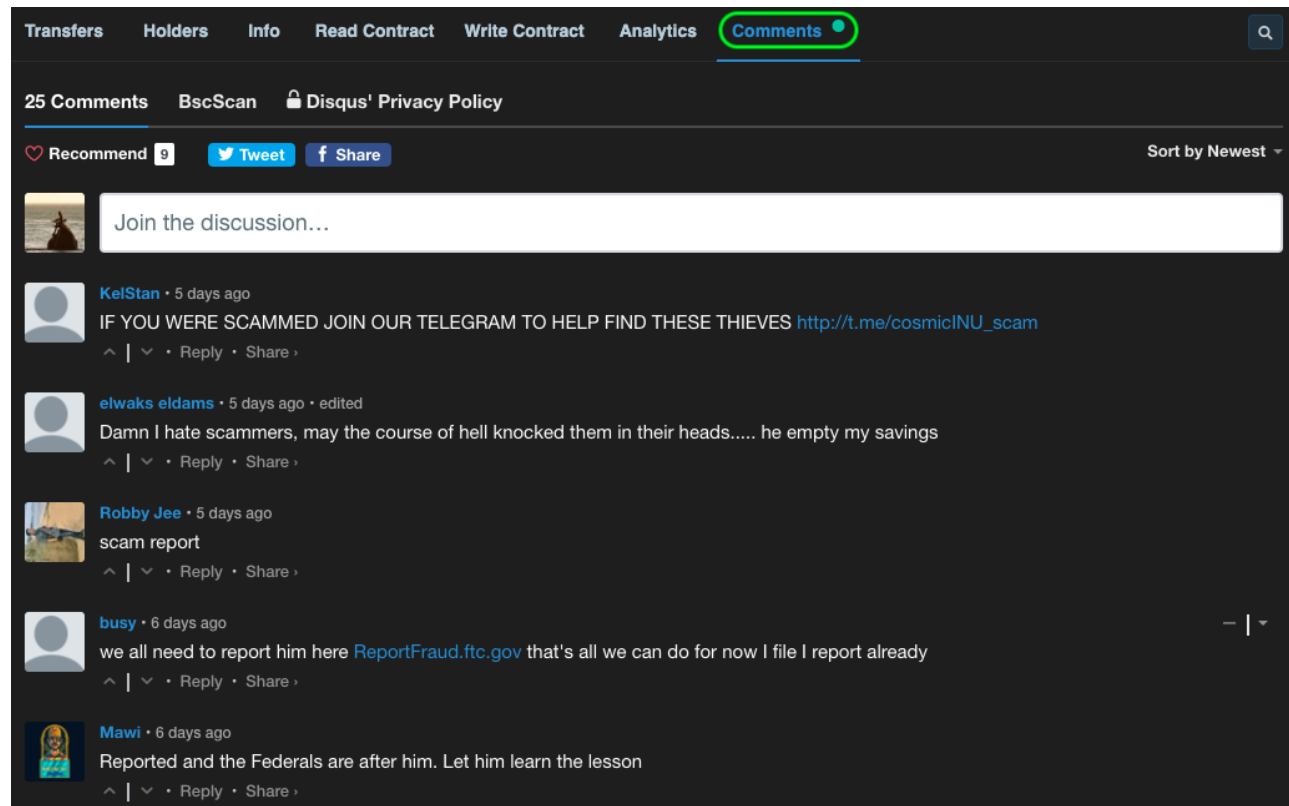

[Ethereum](#)

[Binance Chain](#)

## Polygon

A block explorer is the ultimate source of all information about a token. Here you will be able to dive as deep as you want into the the liquidity pool, comprehensive transaction data, token contract code, token creator's address and more.

One easy place to start is the "comments" section. To get there, copy and paste the token contract address into the search box, then click the "comments" tab.

The comments section of a token contract should not be too heavily relied upon, as anyone can post whatever they want. However it can still be a great place to look for any red flags. In this example above, the token holders have posted warnings to others about the scam, and even went as far as finding a picture of the scammer himself. If you see any red flags like this, then it's time to dig a little deeper and confirm any indicators.

Next, you could look into the contract creator's address to see if they have removed any liquidity (aka LP tokens) from the pool. The creator's address can be found in the upper right side of the token contract page (using the same example as above).

**Contract Overview**

Balance: 0 BNB

BNB Value: \$0.00

Token: \$0.00

**More Info**

My Name Tag: Not Available, Update?

Contract Creator: 0x9d2ae2912151de8913...  
at txn 0x6173f34a79d1723884...

Token Tracker: CosmicINU (CINU)

From here you can look for the initial provision of liquidity, and also see if any liquidity has been removed.

In this transaction, the creator provided 100 BNB (\$28.5k USD) of initial liquidity to the BNB-CINU pool. Then, less than 1 hour later, they removed 1,723 BNB (\$484k USD) of stolen funds from the pool, and sent it out to other various wallets.

Yet another level of confirmation is to look at the liquidity pool itself. From the contract creator's provision or removal transactions, we can find the pool's contract address (in this case, labelled "Pancake LP's"). This will provide a different view of the transactions above, and indicate how much liquidity is left in the pool.

## Token Sniffer

Token Sniffer is an easy tool which can be used to search for various tokens on both Ethereum and Binance Chain. Simply copy and paste the token contract address into the search bar, and TokenSniffer will provide info on exploits, a brief contract audit, and more. Another useful feature is the list of [known scams and hacks](#), which is a great place to quickly see if a suspected token is listed.

**Token Sniffer** Search tokens by name or address

**Wolfy (WYT)** BSC:0x70c5f6abf9e1e39a96dbcfb7e573a7c8015e7002

**WARNING:** This token has been flagged due to evidence of a **bug**, **hack**, or **scam**:

- [Exploit #018 \(scam: inability to sell\)](#)

If this is incorrect please contact us on [Twitter](#).

**BscScan** <https://bscscan.com/token/0x70c5f6abf9e1e39a96dbcfb7e573a7c8015e7002>

**Date Deployed** Fri, 18 Jun 2021 17:10:33 GMT | 7d ago | [Block 8401109](#)

[View contract source](#)

**"Smell Test" (automated contract audit)**

- ✓ Verified contract source
- ✗ No prior similar token contracts
 

There are highly similar contracts that were deployed prior to this one. Cloned contracts may indicate a low quality token (e.g., pump & dump) unless there exists an offering other than the token itself.
- ✓ Source does not contain a proxy contract
- ✗ Source does not contain a pausable contract
 

The source code contains a Pausable contract which could potentially allow transfers to be halted.

Note: the Smell Test is an experimental new feature and may not be 100% accurate or detect all possible vulnerabilities. The results are not to be interpreted as advice and should be considered in the context of the project as a whole along with external information. Always do your own research and consult multiple sources of information.

## BSC Check

BSC Check is a BNB Chain specific tool that is also very easy to use. Simply enter the token contract in the search bar, and BSC Check will show you:

- Contract owner status - Is the liquidity renounced/locked?
- Is there known honeypot code in written into the contract?
- Developer's wallet info
- Liquidity Pool info

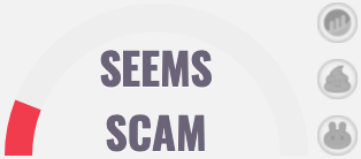

- Top token holders
